

Competitor Analysis

Desk Booking & Floor Mapping: Eptura and Bookker vs SoCampus Facility Management

This document summarizes the desk-booking and floor-mapping capabilities of two competitor platforms — **Eptura** (Eptura Engage, formerly Condeco, plus Eptura Workplace) and **Bookker** (Bookker Corporate SL) — based on their public documentation, help centers, product pages and app-store listings. The final page is a single-slide comparison against our Facility Management platform, including features planned in our Phase 1/Phase 2 roadmap.

Platform	Who they are	Positioning
Eptura	US-based worktech giant; merger of iOFFICE, SpaceIQ, Condeco, Proxyclick, Teem, Archibus, Serraview. Booking product: Eptura Engage.	Enterprise IWMS suite. Deep MS365/Teams integration, sensors, AI booking (Copilot), CAD-based space planning. Quote-based pricing (~\$10-15/user/mo per 3rd-party estimates).
Bookker	Bookker Corporate SL, Madrid (2018). Desk, room, parking and canteen booking. Clients: Telefónica, Toyota, Danone, Itaú.	AR-first booking: paper/sticker tags scanned with the phone camera - no hardware. Modular pricing, not public. Weak app-store ratings (Google Play 1.9/5).

Contents

- 1. Eptura - feature inventory (pages 2-3)
- 2. Bookker - feature inventory (page 4)
- 3. Comparison slide: Eptura vs Bookker vs Ours (final page, landscape)

1. Eptura (Engage / Workplace)

Desk booking

- Booking channels: web, iOS/Android app, Microsoft Teams app, on-site kiosks. Outlook add-in covers meeting rooms only (not desks).
- Desk models: Fixed (assigned), Flexible (assigned but released if not checked in), Bookable (open) - supports both hot-desking and hoteling. Desks, lockers, parking and booths are bookable 'personal spaces'.
- Hourly and shift-based booking; multi-day and recurring bookings with per-instance edit/cancel; admin-configurable advance windows and weekly limits.
- Book on behalf of others from web and mobile.
- Check-in methods: manual in-app, QR scan, geofence proximity (~250 m), kiosk, sensor-based automatic check-in, badge-swipe (paid add-on).
- Auto-release ('bump'): admin sets a check-in window per group; no check-in within the window auto-cancels and releases the desk. Staggered arrival windows per group; auto check-in edge cases handled.
- Condeco Presence (sensors): touchless check-in, release of no-shows and early-vacated desks, auto-created 'walk-in' bookings when sensors detect unbooked occupancy.
- Attribute/amenity search; desk profiles; key-worker flags (fire marshal, first aider) on floor plans.
- AI (Power tier): intelligent auto-booking from team seating + past patterns; Copilot conversational booking in Teams.

Floor maps & space planning

- Interactive floor plans with live availability across web, mobile, Teams and kiosks; shows who booked each desk.
- Eptura Workplace: digital-twin floor plans, drag-and-drop editing, neighborhoods with target seat ratios, utilization overlays, predictive capacity analytics.
- CAD: AutoCAD and Revit import (formal Autodesk Alliance partnership); Visual Block & Stack scenario planning.
- Wayfinding kiosks and 3D wayfinding view ('You Are Here') on the Workplace/iOFFICE side; colleague-finder on the map.

Attendance, analytics, admin & notifications

- Sensors: sensor-agnostic via open API (Relogix, PointGrab, VergeSense); badge/access-control data feeds check-in and utilization (Brivo, Kisi listed).
- Analytics: Power BI-based reporting; no-show behavior reports; scheduled hybrid-work reports; Advanced Reports export to Excel/PDF; data-warehouse connection (Power tier); quarterly Workplace Index benchmark.
- Admin: advance windows, duration limits, per-desk/area permissions, per-group check-in windows and bump, restricted desks/neighborhoods, cost codes, post-use cleaning workflows, QR code management (export/print), admin check-in on behalf.
- Notifications: booking confirmations; actionable email nudges when presence is not detected (keep/cancel in one tap); Teams app; no native Slack app for Engage (Slack exists on Teem only).
- Platform: SAML SSO, Azure AD/Okta/SCIM provisioning, open REST API + developer portal, room/desk screens and kiosks via Eptura Device Hub, Azure-hosted, ISO 27001.

Unverified: current per-desk vs per-user licensing; native Slack for Engage; 3D inside Engage itself.

2. Bookker (Bookker Corporate SL)

Desk booking

- Booking flows (app + webapp): form-based search with map or list pick; direct booking on a named resource's calendar; 'reserve a random seat' auto-assign; 1-click reservation using saved preferences.
- AR booking (flagship): point the phone camera at a desk's tag to see live status (free/occupied, who, equipment) and book or check in on the spot - hardware-free paper/sticker tags.
- Check-in/check-out per resource: pre-check-in window, check-in window (grace period), automatic expiry - a booking not checked in on time expires and the desk is released for rebooking; check-out frees it early.
- Recurring bookings ('repetitions') incl. partial-lot booking of only the available dates.
- Supervisor 'reserve for others': group/team bookings in one action, check-in/out for guests, override guest work statuses.
- Fixed vs hot desks; 'cession' - a fixed-desk owner temporarily releases it for others; auto desk allocation on building entry (via access-control integration).
- Advance-window rules per user rule with fallback to per-resource rule.

Floor maps

- Interactive 2D floor plans - pick a desk directly on the plan while booking; office drawings imported.
- AR view provides real-time availability at the desk itself; 'one resource, one tag'.
- Zones via 'Groups' (restrict which resources each user can book); no 3D/digital-twin views found.

Attendance, analytics, admin & notifications

- Presence: check-in-based (tag scan) plus optional integrations - Nespra occupancy sensors, Dorlet access control, Equinsa/Skidata parking, Woffu HR attendance sync.
- Work statuses (in office / teleworking / vacation) with work calendars; statuses can auto-release or assign fixed resources.
- Analytics: usage reports and downloadable metrics; Power BI integration for dashboards. No-show report depth unverified (admin docs login-gated).
- Admin: web management panel - users, roles, resources, usage rules (advance + check-in windows), locking of buildings/floors/resources (locked = invisible/unbookable), holiday calendars that block booking.
- Notifications: email + mobile push, user-configurable per type; some types mobile-only. No Slack/Teams notification channel documented (Teams integration adds video links to room bookings).
- Platform: Bookker Integration Platform (API-first microservices, 18 listed integrations); SSO via Microsoft Entra ID and Google Workspace; iOS + Android apps + webapp (EN/ES/CA/FR/PT).
- Extras: parking with EV chargers, canteen shift booking, visitor management (shallow public docs); modular 'pay for what you need' pricing, not public.

Key sources: bookkercorp.com/en (solutions, augmented-reality, integrations) · help.bookkercorp.com (key concepts, booking, notifications, FAQs) · Google Play / App Store listings. Unverified: QR vs proprietary AR tags, NFC/geolocation check-in, 3D maps, no-show report specifics. Note: Google Play rating 1.9/5 (~271 reviews) - stability complaints.

3. Comparison: Eptura vs Bookker vs SoCampus Facility Management

Ours = current build; (Ph1)/(Ph2) = committed roadmap phase from the approved milestone plan.

Capability	Eptura (Engage/Workplace)	Bookker	Ours (SoCampus FM)
Desk booking core	Yes - web, mobile app, Teams, kiosks; hot-desk + hoteling; hourly/shift; recurring; book for others	Yes - app + web; random-seat, 1-click, AR on-the-spot booking; repetitions; supervisor group booking	Yes - web (responsive); seat-level picker on 2D map; shared/capacity bookings; approval workflows; reschedule/cancel via email
Check-in & auto-release	Yes - QR, geofence, sensor, badge; per-group check-in windows; 'bump' auto-release	Yes - tag-scan check-in; pre-check-in + grace window; auto expiry releases desk	No - not built; Planned - Ph1 - check-in API/UI, grace config, auto-release sweeper, audit log
Floor maps	Yes - interactive plans w/ live availability; CAD/Revit import; neighborhoods; 3D wayfinding; block & stack	Partial - 2D plans + AR tag view; Groups as zones; no 3D	Partial - 2D SVG editor + booker seat picker; CV auto-detect of chairs (OpenCV); Planned - Ph1 - floor-level live map
Presence / attendance	Yes - occupancy sensors (VergeSense etc.), badge-swipe, walk-in detection	Partial - tag-scan based; optional Nespra sensors, access-control & HR sync	No - none; Planned - Ph2 - biometric attendance integration, no-show/walk-in reconciliation
Analytics & reporting	Yes - Power BI; no-show reports; scheduled reports; Excel/PDF export; benchmarks	Partial - usage metrics + Power BI; report depth unclear	Partial - today-only occupancy dashboard + Gantt; Planned - Ph1 - trends, peak, exports, scheduled email reports
Admin controls	Yes - booking rules, check-in windows, restricted desks, cleaning workflows, QR admin	Yes - usage rules, resource locking, holiday calendars, roles	Partial - advance rules, per-user limits, slot capacities, approval chains; Planned - Ph1 - desk blocking/maintenance, grace config, monitoring console
Notifications	Yes - actionable email nudges, push, Teams/Copilot	Yes - email + push, user-configurable	Partial - rich email incl. one-click approval/cancel links; Planned - Ph1 - reminders, release notices, admin alerts
Integrations & platform	Yes - SAML SSO/SCIM, MS365+Google, open API, kiosks/screens, sensor API	Yes - API-first (BIP), Entra/Google SSO, Teams video, Power BI	Partial - JWT auth, SMTP, multi-tenant API backend; SSO/public API on future roadmap
Differentiators	Enterprise IWMS breadth; AI/Copilot booking; sensor ecosystem; CAD space planning	AR-first, zero-hardware tags; parking + EV + canteen; fast rollout	Multi-tenant SaaS; multi-step approval chains (deeper than both); pantry/meal ordering; public booking portal; CV-assisted floor-plan digitization

Takeaway: after Phase 1 we reach functional parity with both competitors on check-in/auto-release, floor-level live maps, analytics and admin controls - while keeping unique strengths (approval workflows, multi-tenancy, pantry, public portal). Phase 2 biometric integration gives us presence validation that Bookker lacks natively and Eptura only offers via paid sensor/badge add-ons.
